

ZURICH ACCOUNT-BASED PENSION (ZABP) MEMBER OUTCOMES ASSESSMENT

INTRODUCTION

In this report, Equity Trustees Superannuation Limited publishes the results of our annual assessment of how well the Zurich Account-Based Pension (ZABP) product (the **product**) issued from Zurich Master Superannuation Fund (the **fund**) provides member outcomes and promotes members' financial interests. The assessment is based on information as at 30 June 2023.

METHODOLOGY AND STRUCTURE

In conducting this assessment, we compared the product to other choice superannuation products included in statistical data published by the Australian Prudential Regulation Authority (**comparable products**) using the criteria in Part 6 of the *Superannuation Industry (Supervision) Act 1993* and Prudential Standard SPS 515 *Strategic Planning and Member Outcomes*.

This report includes:

- our overall assessment of whether the product provides optimal member outcomes and promotes their financial interests;
- a dashboard that depicts our assessment of the product's market-relative performance for each outcome we aim to provide members;
- a table summarising the key metrics that we relied on when making this assessment; and
- our commentary on this performance that includes action items to improve suboptimal performance.

For each member outcome, the dashboard presents the relevant segment of market performance. The width of each segment is based on the range of market performance for each outcome and is specific to each outcome. The positioning of the black performance indicator bar against the colour coding is our assessment of how well the outcome has been delivered. The colour coding gives a visual representation of performance that moves from neutral (yellow) through orange to least tolerance (red), and in the opposite direction from yellow to the target (or green) area of the dashboard. The assessment of each member outcome is based on several equally-weighted metrics. Accordingly, if one metric is outside our tolerance level it doesn't automatically mean the entire member outcome is outside our tolerance level.

Example dashboard for illustrative purposes only

The target is generally the average position of the comparable products while the tolerance level is the trigger for us to consider any necessary actions to improve member outcomes.

Please visit our [website](#) to view a short video that provides more information about the operation of the dashboard.

OVERALL ASSESSMENT

Having carefully considered the comparisons of the product with comparable products set out in this report, including the dashboards, metrics, commentary, and other relevant information available to us at the time of writing, we have concluded that as a result of the following factors the product is promoting members' financial interests:

1. the fees and costs that affect the return to members are appropriate having regard to their financial interests;
2. the net returns for the product (i.e. returns after deducting all fees, costs and taxes) are not consistent with market rates;
3. the level of investment risk for the product is acceptable in relation to the net returns generated;
4. the investment strategy for the product is appropriate;
5. the options, benefits and facilities offered in the product are appropriate for members; and
6. the scale of the product and the fund does not disadvantage members.

ACTION ITEMS

To improve investment returns, we will complete a review of the investment strategy and make changes where necessary.

To reduce complaints, we will continue to work with Zurich on reducing the number of complaints to an acceptable level and address any areas of weakness.

DASHBOARD

STRATEGIC CONTEXT

Working together with the fund's promoter, Zurich Australia Limited, our purpose is to provide members with:

- simple, viable and effective superannuation products that are competitive and leverage the Zurich Group's capabilities and reputation;
- excellent customer service, strong governance and compliance management along with sustainable investment returns; and
- no increase in the current administration fee levels (based on published fees as at 30 June 23) above Consumer Price Index rises before June 2025.

To support this purpose, our goals for the fund are to deliver competitive products to members, meet members reasonable expectations, maintain strong governance and maintain fund viability (while investigating long term strategic solution).

The product is a choice pension product.

INVESTMENT RETURN

Outcomes Investment return for a \$50,000 account balance in the product^{1.0} is consistent with market indexes.

Our product's performance relative to comparable products

Metrics	Ref	Metric Label	Value	Tolerance	Target
	1.1	1-year actual net return	6.74%	6.98%	7.43%
	1.2	3-year actual net return	4.74%	4.44%	5.18%
	1.3	5-year actual net return	3.66%	3.80%	4.20%
	1.4	10-year actual net return	5.60%	5.02%	5.79%

1.0 Investment returns and associated targets and tolerance levels are weighted averages for the product. The weighted averages are based on the performance, asset allocation and funds under management of the investment options available in the product. The table in Appendix 1 provides more information.

1.1 – 1.4 The product's fee structure leads to different net returns for different account balances. The table in Appendix 2 provides more information.

1.2 – 1.4 Net returns are based on historic returns and the current fee structure.

Commentary

The performance indicator measures the average investment return of all investment options in the product over one, three, five and 10-year periods and is based on an equal weighting of all the metrics in the above table.

Appendix 1 displays the returns for each investment option available in the product and its weighted average returns over these periods.

This commentary focuses on the five-year weighted average return to 30 June 2023. The 5 year term is a balance between capturing any shorter term developments with the longer term trend of return performance.

When reading this commentary, it's important to bear in mind that past performance is not a reliable indicator of future performance.

Over the five years to 30 June 2023 the product's weighted average investment return was outside of our tolerance level. The major detractor from investment performance over the five-year period was asset allocation. Specifically, there was an underweight allocation to the Equities and Property asset classes and an overweight allocation to the Fixed Interest asset class relative to peers.

As a result, we are not comfortable that the product's weighted net returns are consistent with market rates and therefore do not advance members' financial interests.

To improve net returns we will complete a review of the investment strategy and make changes where necessary.

INVESTMENT RISK

Outcomes Investment risk for a \$50,000 account balance in the product is consistent with the Standard Risk Measure (SRM)^{2.0}.

Our product's performance relative to comparable products

Metrics	Ref	Metric Label	Value	Tolerance	Target
	2.1	Negative annual net returns over last 10 years	2.16	2.00	1.00

2.0 Negative annual returns and associated targets and tolerance levels are weighted averages for the product. The weighted averages are based on the performance, SRM and funds under management of the investment options available in the product. Portions of years have been rounded up or down to a whole year.

Commentary

The performance indicator measures the weighted average number of negative annual returns for the 10 years to this date.

When reading this commentary, it's important to bear in mind that:

- we have focussed on asset classes that have a material effect on the number of negative annual returns over the last 10 years; and
- past performance is not a reliable indicator of future performance.

Over the 10 years to 30 June 2023 the weighted average number of negative returns for the product was outside our tolerance level.

The contributing factors of the negative annual returns over the period were a combination of manager selection and the product's fees and costs in the following asset classes:

- Australian Shares;
- International Shares; and
- Cash.

While we cannot remove underperformance in the past, we have sought to protect member outcomes by reducing investment risk through changes to the investment strategy, the results of which we are seeing through the product's short term investment returns.

We therefore believe these changes will enable the level of investment risk of the product to fall within our tolerance level in future. No further action is required as a result of this assessment.

FEES AND COSTS

Outcomes Fees (gross of tax) for a \$50,000 account balance are consistent with market rates.^{4.0}

Our product's performance relative to comparable products

Metrics	Ref	Metric Label	Value	Tolerance	Target
	4.1	Total fees	1.16%	1.47%	0.98%

4.0 The product's fee structure leads to different net returns for different account balances. The table in the Appendix 2 provides more information.

4.1 These fees include a weighted average investment fee that is based on the investment fees and funds under management of the investment options available in the product.

Commentary

This table lists the product's total fees and costs (administration and investment fees and costs). Other fees may be payable which are set out in the product's disclosure documents.

The performance indicator measures total fees and costs together against comparable products.

Total fees were within our tolerance level. No action is required as a result of this assessment.

As a result, we are comfortable that fees and costs are consistent with market rates and therefore are appropriate having regard to members financial interests.

MEMBER SERVICES

Outcomes Administration services satisfy member expectations.

Our product's performance relative to comparable products

Metrics	Ref	Metric Label	Value	Tolerance	Target
	8.1	Administration-related EDR complaints	4.39	3.50	1.50
	8.2	Service Level Achievement	90.00%	80.00%	90.00%
	8.3	Administration fees	0.76%	0.62%	0.38%
	8.4	Information security controls	Effective	Partially ..	Effective

8.1 EDR means "External Dispute Resolution".

8.1 This is the annual number of administration-related complaints to the Australian Financial Complaints Authority per 10,000 member accounts.

8.2 Service level achievement measures the portion of new member, contribution and benefit payment transactions that were processed within our service level.

8.4 This is our view of the effectiveness of the Administrator's information and cyber security controls based on an independent review completed during the year.

Commentary

The performance indicator measures the delivery of administration services against our service levels, and against the cost of similar services for comparable products.

The performance indicator, which is within our tolerance level is based on equal weighting of the above metrics.

Administration fees were outside of tolerance level. As total fees are within our tolerance level, no action is required as a result of this assessment.

The total number of complaints about administration services for the fund that have been made to the Australian Financial Complaints Authority is outside our tolerance level. However, it's important to note that none of these complaints relate to the product.

As a result, we are comfortable that administration services satisfy member expectations because of the high rate of service level achievement, there were no complaints about administration services for the product, and the administrator's information and cyber security controls are effective.

Therefore, we consider the options, benefits and facilities offered in the product are appropriate for members.

SCALE

Outcomes	The fund is likely to deliver optimal outcomes in the future.				
The scale of the fund relative to comparable products					
Metrics	Ref	Metric Label	Value	Tolerance	Target
	9.1	RSE adjusted total accounts growth rate	-9.53%	-6.25%	-2.50%
	9.2	RSE Net Cash Flow Ratio	-9.29%	-2.75%	-0.50%
	9.3	RSE Net Rollover Ratio	-7.17%	-3.00%	-1.75%
9.1 The RSE adjusted total accounts growth rate is the average annual percentage change in member accounts averaged over the three year period, excluding Successor fund Transfers (SFTs) and account consolidations.					
9.2 The RSE Net Cash Flow Ratio is members' benefits flows in less members' benefits flows out as a percentage of cash flow adjusted net assets averaged over the three year period, excluding SFTs.					
9.3 The RSE Net Rollover Ratio is rollovers in less rollovers out as a percentage of cash flow adjusted net assets averaged over the three year period, excluding SFTs.					

Commentary

The performance indicator measures the fund's growth and ability to deliver scale benefits to members against other funds.

The performance indicator, which is below our target and outside tolerance level is based on equal weighting of the above metrics.

The fund is closed to new members and continues to be in run off, with membership decreasing by 10% in FY23. Membership is expected to decrease at a similar rate over the next 3 years.

With total member benefits of approximately \$849m and approximately 9,000 members, we believe that this run off is

manageable while the fund’s fee guarantee arrangement is in place until 30 June 2025. For further information on this arrangement please refer to page 21 of the fund’s Annual Report <https://www.zurich.com.au/content/dam/au-documents/personal/superannuation/annual-reports/zurich-master-superannuation-fund-annual-report-2023.pdf>.

To protect members’ interests, we:

- are working with Zurich on a strategy to address the future of the fund once the fee guarantee arrangement expires; and
- will continue to monitor the impact that the expected reduction in fund size may have on member outcomes and take appropriate action if required.

LIQUIDITY

Outcomes	Benefit and rollover requests can be met in a timely manner from investments.				
Our product’s performance relative to comparable products					
Metrics	Ref	Metric Label	Value	Tolerance	Target
	10.1	Investment liquidity in a GFC scenario	90.62%	40.00%	80.00%
10.1 Liquidity is a weighted average that is based on the liquidity in a Global Financial Crisis scenario and funds under management of the investment options available in the product. The table in Appendix 1 provides more information.					

Commentary
The performance indicator measures the fund’s ability to meet benefit and rollover requests in a timely manner.
We regularly monitor whether the investments would be able to meet cash requirements in extreme situations. Based on our analysis, we consider that benefits are supported by liquid investments.
As a result, we are comfortable that the level of liquidity risk for the product is acceptable.
